

Basic Pipeline

Course Description:

Basic Pipeline Orientation is a one-day safety orientation that meets SafeLandUSA and the Gold Shovel Standard certification. Basic Pipeline Orientation provides general safety information that workers need to know before entering a company worksite and while performing their assigned work duties. Students will learn about hazards they may encounter in the pipeline industry and become familiar with various practices to mitigate those hazards. Students will also gain understanding of their rights under OSHA and how those rights apply to their workplace.

Basic Pipeline Orientation provides essential safety information workers need in order to be aware of and recognize hazards they may face. The 1-day course has been designed to engage students with interactive content and real-world case studies. Knowledge is measured at the end of each module.

Covered Topics Include:

Basic Pipeline Orientation provides essential safety information workers need in order to be aware of and recognize hazards they may face.

The one-day course has been designed to engage students with interactive content and real-world case studies. Knowledge is measured at the end of each module.

- Hazard Communication
- Environmental
- Safety Culture
